Sonoran Data Partners

We help banks and mid-size companies turn customer data into decisions their executives can act on.

Put the Wildcat Rewards pilot where customers already qualify.

For Jordan Ellis, VP of Card Growth | Bear Down Bank

Prepared for Data Visualization, University of Arizona. Course scenario using a provided dataset.

Sonoran Data Partners

407 customers already qualify for Wildcat Rewards, but mailing your biggest state would mostly reach customers who don't.

407 customers qualify today and don't hold a Bear Down credit card

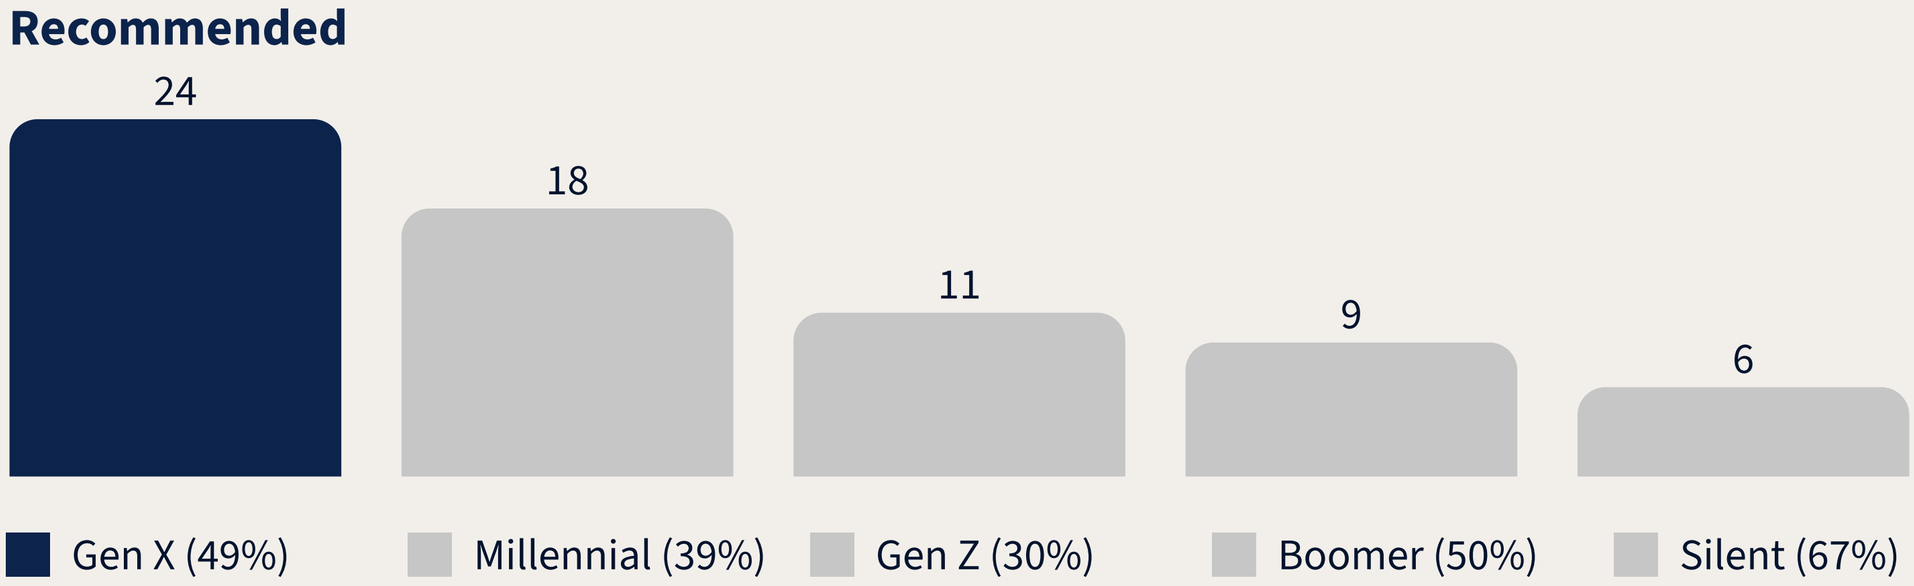

86% of California customers don't qualify, though it's the state with the most customers (210 of 244)

Qualified customers have no Bear Down credit card, a FICO score of 670 or higher, and owe less than twice their yearly income. Customer and card extracts as of September 30, 2026; all 2,000 customers included.

We answer three questions in order: who qualifies, which group gives the clearest test, and who responds.

	Question	Data we'd use	What you see, and when
1	Who qualifies today?	Customer and card extracts	Confirmed pilot count, Week 1
2	Which group gives the clearest test?	Eligibility rate and pool size by state and generation	Pilot group and success measure, Week 2
3	Who responds?	Pilot mailing responses from Bear Down	Response dashboard and next-wave recommendation, Weeks 3-6

The work sample you reviewed already found the clearest test: 24 Gen X customers in Texas.

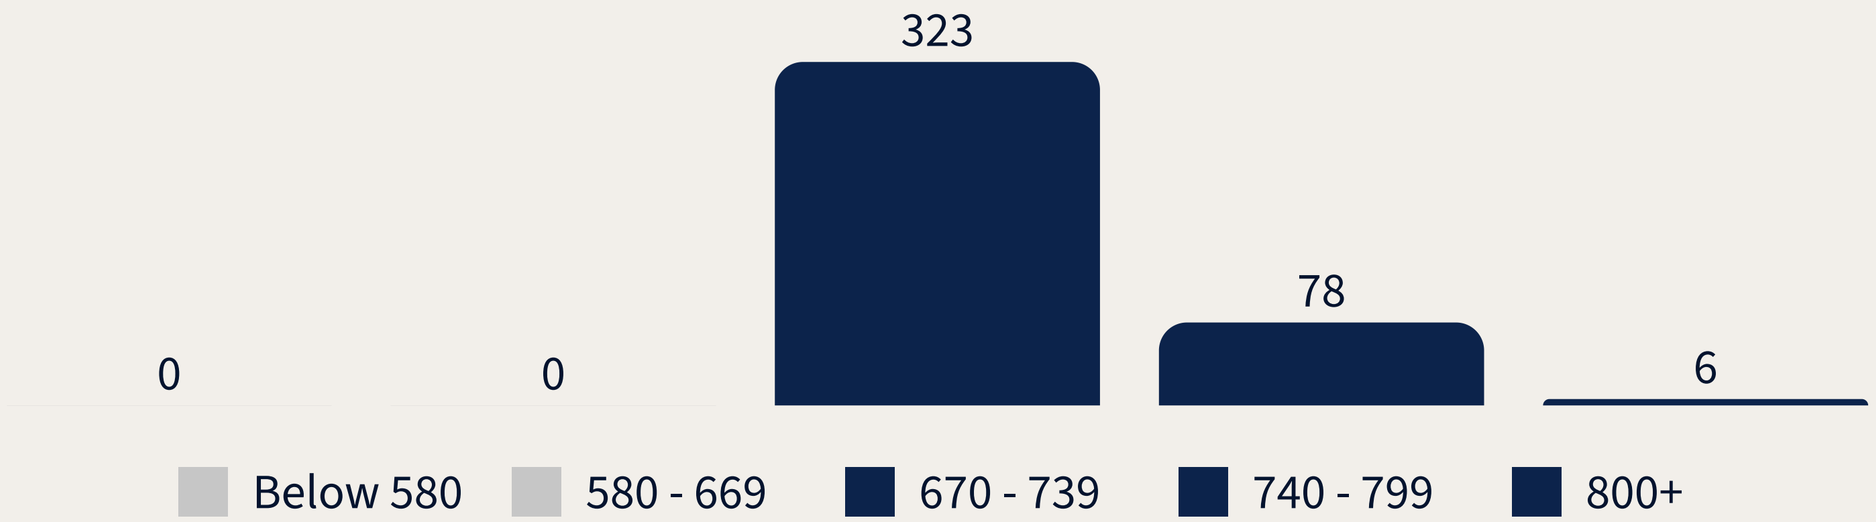

Percentages show the share of each generation's Texas customers who qualify.

Boomer and Silent qualify at higher rates, but only 15 customers between them.

Customer and card extracts as of September 30, 2026; all 2,000 customers included.

Sonoran Data Partners

Our screen holds the line: none of the 407 qualified customers scores below 670.

Every customer on the list also has no Bear Down credit card and owes less than twice their yearly income.

Customer and card extracts as of September 30, 2026; all 2,000 customers included.

Phase 1 runs six weeks: final pilot list, a success measure, and a response dashboard.

When	What happens	What you get
Week 1	Refresh the extracts; your compliance team reviews the targeting	Confirmed pilot list count
Week 2	Confirm the success measure, then Bear Down mails the pilot	Pilot mailed to 24 Texas Gen X customers
Weeks 3-6	Track applications against the success measure	Response dashboard and next-wave recommendation

Proposed success measure: the share of the 24 who apply within four weeks of mailing.

Next wave ready: 44 more qualified customers in Texas.

Sonoran Data Partners

Approve a six-week first phase to mail the pilot to Texas Gen X customers and measure the response.

6 weeks, start to finish

24 qualified customers mailed

44 more qualified Texas customers ready for the next wave

What we need from Bear Down: approval today, and access to pilot response data.
